# Olive oil

Virgin, refined and pomace oils

| SOURCE VERSION | PRODUCT BASIS |
|---|---|
| 1.0 (2026-08-14) | As placed on market |

## 01 Recorded limits

Ceilings in µg/kg (ppb). Provenance labels describe the supplied record; instrument verification remains a separate gate.

| ANALYTE | CEILING | PROVENANCE / SOURCE |
|---|---|---|
| Lead Pb | 80 | Government limit [1] |
| Cadmium Cd | 30 | Government limit [2] |
| Total arsenic tAs | 100 | Government limit [3] |
| Inorganic arsenic iAs | 100 | Bounded by tAs [3] |
| Total mercury tHg | 20 | Government limit [4] |
| Nickel Ni | 100 | Read-across [5] |
| Aluminium Al | 1,000 | Read-across [6] |
| Total chromium Cr | 300 | Read-across [7] |
| Tin Sn | 200,000 | Read-across [8] |

## 02 Additional species

| SPECIES | CEILING | RECORD DISPOSITION |
|---|---|---|
| Methylmercury (MeHg) | 20 | Bounded by tHg [4] |
| Hexavalent chromium (Cr-VI) | 10 | Read-across [9] |

All eleven recorded analytes remain visible. A parent-bound ceiling is shown numerically. Assay timing and speciation triggers require the approved testing schedule.

> **REVIEW COPY**
>
> Layout proof only. Values are transcribed from the local compiled record; this copy does not approve their legal basis or issue a certification standard.

# Sources behind the schedule

Reference numbers connect every ceiling to its recorded instrument. Scope is reproduced from source metadata, including read-across analogs. These are source pointers, not a fresh primary-text verification.

| REF / USED FOR | RECORDED INSTRUMENT AND SCOPE |
|---|---|
| [01] Pb | China GB 2762-2025<br>Fats, oils and their products (GB 2762-2025 Table 1, item 12.1)<br>Anchor ID absent from the current HMI register snapshot. |
| [02] Cd | Israel FCS heavy-metal guidelines (2016)<br>Fats, oils, and fat emulsions (water-in-oil type) |
| [03] tAs, iAs | Codex fats and oils standards<br>Named vegetable oils |
| [04] tHg, MeHg | Israel FCS heavy-metal guidelines (2016)<br>Fats, oils, and fat emulsions (water-in-oil type) |
| [05] Ni | Commission Regulation (EU) 2024/1987<br>infant/young-child formula, liquid |
| [06] Al | Commission Regulation (EU) 10/2011<br>plastic food-contact materials and articles |
| [07] Cr | China GB 2762-2025<br>Raw milk, pasteurized milk, sterilized milk, modified milk and fermented milk (GB 2762-2025 Table 7, item 6.1); total Cr, not Cr-VI<br>Anchor ID absent from the current HMI register snapshot. |
| [08] Sn | Commission Regulation (EU) 2023/915<br>canned foods other than canned beverages, except canned dried and canned powdered products |
| [09] Cr-VI | California hexavalent chromium MCL<br>drinking water |

**HOW TO READ PROVENANCE**

Government limit, read-across, precautionary choice and parent-bound ceiling are different derivations. Matching a number does not make those derivations interchangeable.

Source titles with an available URL are clickable. A register URL may lead to an index or secondary host; release checks must establish the actual primary instrument.

# Basis & review notes

## 03 Basis disclosures

Two cells use a source basis different from total oil content. The proof keeps those distinctions visible without approving the conversions.

| ANALYTE | SOURCE BASIS | TREATMENT RECORDED |
|---|---|---|
| Cr-VI | Drinking water | The source is a water concentration ceiling. The record applies a conservative oil-content read-across; its density conversion needs independent review. |
| Al | Specific migration into food | The record applies the migration value as a total-content ceiling. It is not direct total-content regulation of olive oil. |

### The attached export is a different artifact

The supplied landscape web export omits inorganic arsenic from the main schedule and exposes a raw footnote entity. This proof restores the numeric parent-bound display from the record.

### Source identity still needs reconciliation

The current record names GB 2762-2025 for lead and total chromium, but those exact anchor IDs are absent from the HMI register snapshot used here. The chromium narrative also still mentions the 2022 edition.

### Version labels disagree

The page manifest calls this version 1.0 (2026-08-14). The compiled record carries v1.1 (2026-08-25, full-panel numeric completion). This proof preserves both facts and does not select a new effective version.

## 04 About this proof

This three-page design sample covers the limit schedule, source map and review notes. It does not reproduce the complete occurrence narrative, jurisdiction matrix or program manual. No certification threshold, DOI, effective date or live download was changed.
